As a Student Organizer in a drone event, I managed event logistics and oversaw drone manufacturing. I gained hands-on experience with CNC machines, 3D printers, and laser cutters, enhancing my understanding of machining and manufacturing. This role taught me effective stakeholder communication, time management, and stress handling under tight deadlines, preparing me well for dynamic roles in mechanical engineering.

PROJECTS

JARVIS Virtual Assistant integrated with a machine.

01 Jan, 2024 - 20 May, 2024

Mentor: Mr. Rahul K. Patil | Team Size: 1

Key Skills: AI Mobile Robotics CAD Fusion Ansys ML Algorithms Active Learning Python

In essence, this project is a virtual assistant that has been coupled with a very specific equipment (drilling, cutting, etc). The job of a virtual assistant is to launch the programme by just speaking the term that was introduced to the Python programme as a query. The whole set of queries and algorithms required to operate the machine efficiently are included in the Python programme.

Design and Analysis of Fire Fighting Robot

- Machining
- Python

As a mechanical engineering student, I contributed to designing an autonomous firefighting robot aimed at navigating buildings independently to detect and extinguish fires. The robot used infrared cameras, smoke detectors, and SLAM-based navigation to locate fire hotspots, avoid obstacles, and adapt in real time. I worked on 3D modeling, performance analysis, and system assessment, leveraging CAD and simulation tools. This project deepened my knowledge of fire safety, automation, and robotics, enhancing my skills in project management, algorithm development, and system integration.
